

Autodelete

1. Foreword

We currently use a custom Auto-delete bot with the exact functions I will describe. If you need it, I can send you the code so you can take a look. It's hosted on the same platform we plan to use, with the \$1 plan, so it should be possible to integrate. What we want now is to integrate these functions into your bot, so we don't have to host two separate bots, as this is the only function the other bot serves. Additionally, we want to make some improvements in how the commands are handled.

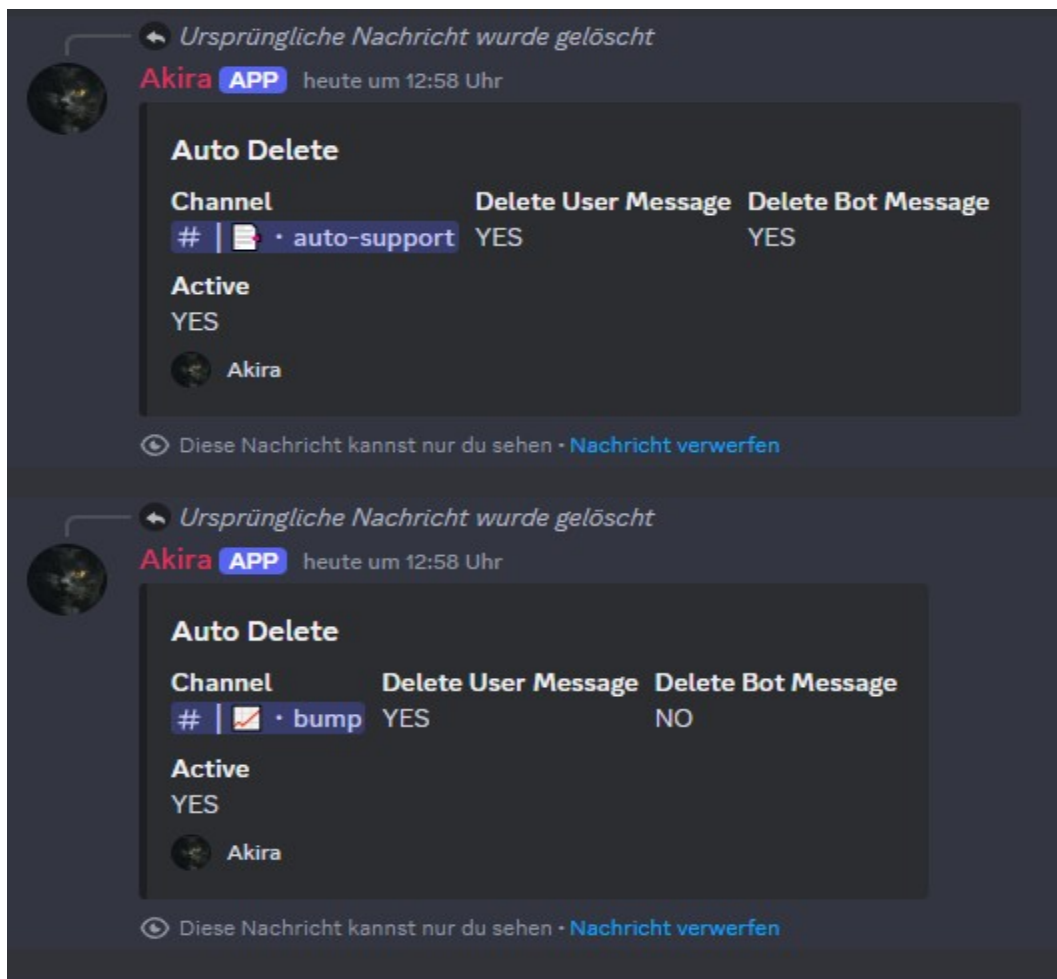

2. Current State

The bot deletes messages in specific channels that we assign. It can be set to either delete messages from members, from other bots, or from both, but it won't delete pinned messages. It will delete the messages every X seconds (We for now have it set to 30s)

Unfortunately, we don't have a way to add channels or change the configuration of existing auto-delete channels without modifying the code. To make changes, I have to log into the hosting page's console and manually add or delete lines in the code.

The only command the bot has is the `/list` command, which shows which channels it's set up for and the configuration for each of them.

Example of the `/List` command:

3. How it should be in the future with your Bot

3.1 Functionallity

- If possible, the bot should delete messages after X seconds of them being sent, rather than deleting messages every X seconds. This way, it avoids situations where someone types a message, and it gets instantly deleted just because they happened to send it right when the 30-second timer for the auto-delete function was triggered. If that's not possible or takes too much resources, we can also let it delete the channel every X seconds.
- It should let me define a separate configs for multiple channels
- For each channel, we need the ability to toggle the auto-delete function on and off without having to delete the entire setup for that channel. This way, we can easily enable or disable the auto-delete feature while preserving the channel's configuration.
- Other than that we need to define per channel if we want to delete Member Messages, Bot Messages or Both
- Other than that, we need to define, per channel, whether we want to delete member messages, bot messages, or both and the timerange of message being deleted.
- Pinned messages should always be protected and never be deleted under any circumstances.
- As always, permissions for the commands should be manageable through our permission system. They should not be usable by default and should only be accessible to the roles/users I add to it.

3.2 Commands

/Autodelete-setup [Channel] [Bot/Member/Both] [Delete-Time]

- This command sets up the configuration for a new channel based on the criteria and variables I described earlier

/Autodelete-delete [Channel]

- This command will delete the configuration for a whole channel

/Autodelete-show

- This command will display all the set-up channels and their configurations, just like the example from the existing bot, but with an improved and more visually appealing design.

/Autodelete-toggle [Channel] [ON/OFF]

- This command toggles the auto-delete function for an existing channel that is already set up. It can either disable (essentially pause) or enable the function
