

Bump-Reminder

1. Foreword

I've seen a custom-made bot with exactly the functionality I want, so there must be a way to implement this. I will use screenshots of this bot from another server as references.

Basically, there's a bot called "DISBOARD" on our server, as well as on many others. This bot has a /Bump command that can be used every 2 hours. It's limited per server, not per person, meaning that once someone uses it, it's locked for 2 hours for the whole Server. To maximize the usage, we want to create a role called "@Bump Reminder," which people can assign to themselves to get pinged whenever the 2-hour mark has passed, so they know when they can use the /bump command again.

This is how the /bump command from the other bot looks like when it gets executed:

2. Current State

There is currently no existing process for this. We just want to integrate it because it is completely missing.

3. How it should be in the future with your Bot

3.1 Functionallity

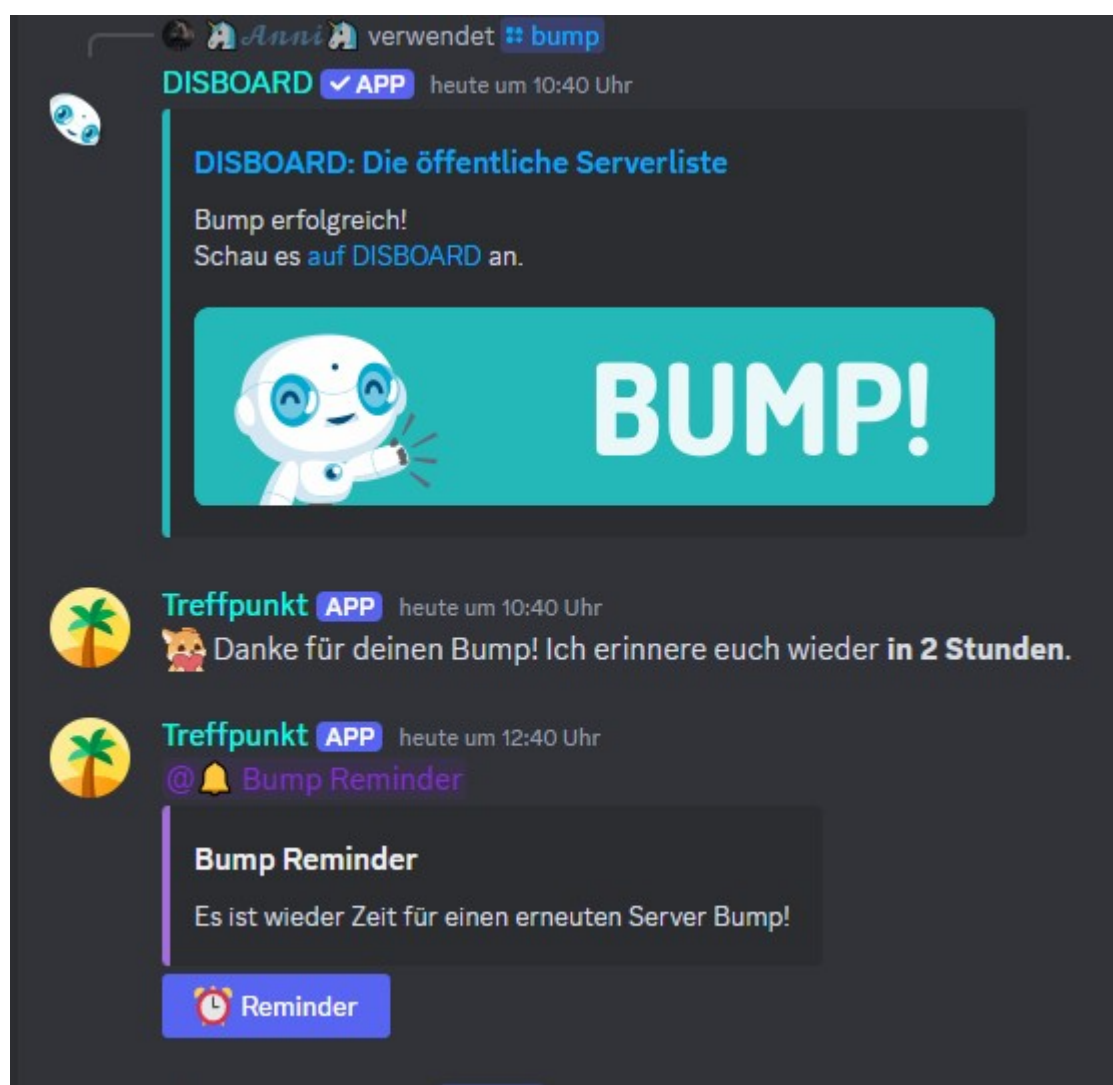

The bot needs to detect when the bump command for DISBOARD has been successfully used. Once DISBOARD confirms the bump, our bot should start a 2-hour timer.

When this timer expires, the bot should ping the predefined role and post an embed saying "It's time to bump again."

In addition, the embed should include a button that says "Remind me!" which, when clicked, either assigns the predefined bump role (if the user doesn't have it) or unassigns it (if the user already has it). After a successful bump on the DISBOARD bot, when DISBOARD confirms it with its message, our bot should post a small "Thank you for bumping ♥ I will remind you in 2 hours again" message.

As always, permissions for the commands should be manageable through our permission system. They should not be usable by default and should only be accessible to the roles/users I add to it.

Example of the other servers Bot:

This picture exactly shows what I just described. When clicking the "Reminder" button, the bot will show an embed that only the user can see, informing them whether the "Bump Reminder" role has been added or removed from their profile.

3.2 Commands

/bump-role [Role]

- This command allows me to define which role gets pinged.

/bump-reminder [On/Off]

- Toggles the whole module to be enabled or disabled.

/bump-channel [@Channel]

- This command allows me to set up the channel where the bot will post the reminders for the "Bump Reminder" role.

/bump-config

- This command shows whether the module is enabled or disabled, displays which role is used, and indicates the channel where the bot will post the reminders.
