

Invite-Tracker

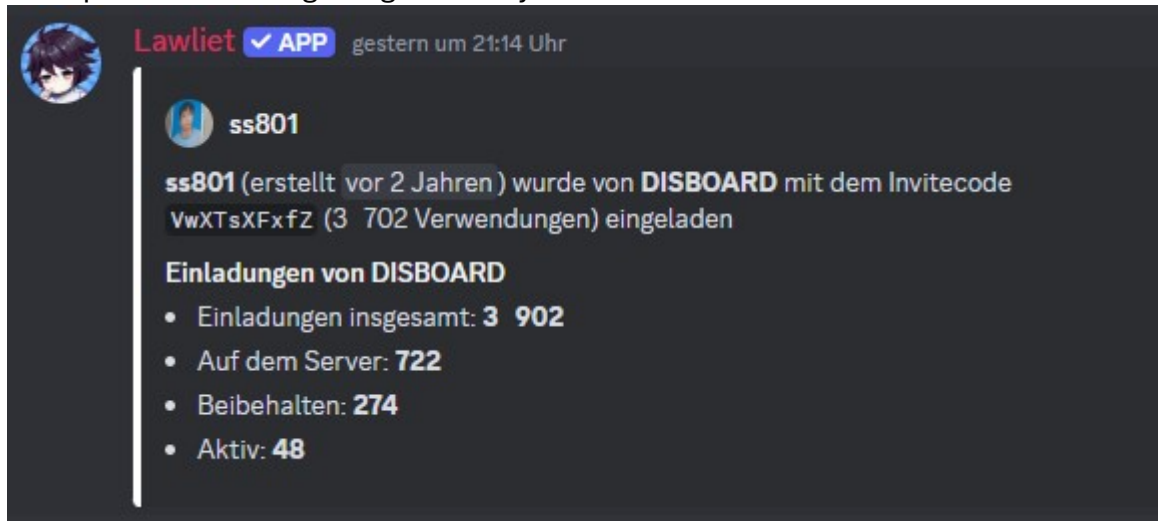

1. Foreword

Discord's native options and other bots for tracking invites are quite limited and not very detailed. The only truly informative bot we've found for this purpose is Lawliet, which we currently use just for invite tracking. However, we want to better customize this feature to suit our needs and also plan to kick Lawliet from the server by integrating invite tracking directly into our (your) bot.

2. Current State

As mentioned, we currently track invites with the Lawliet Bot. It posts the following embed within a to-be-defined log channel:

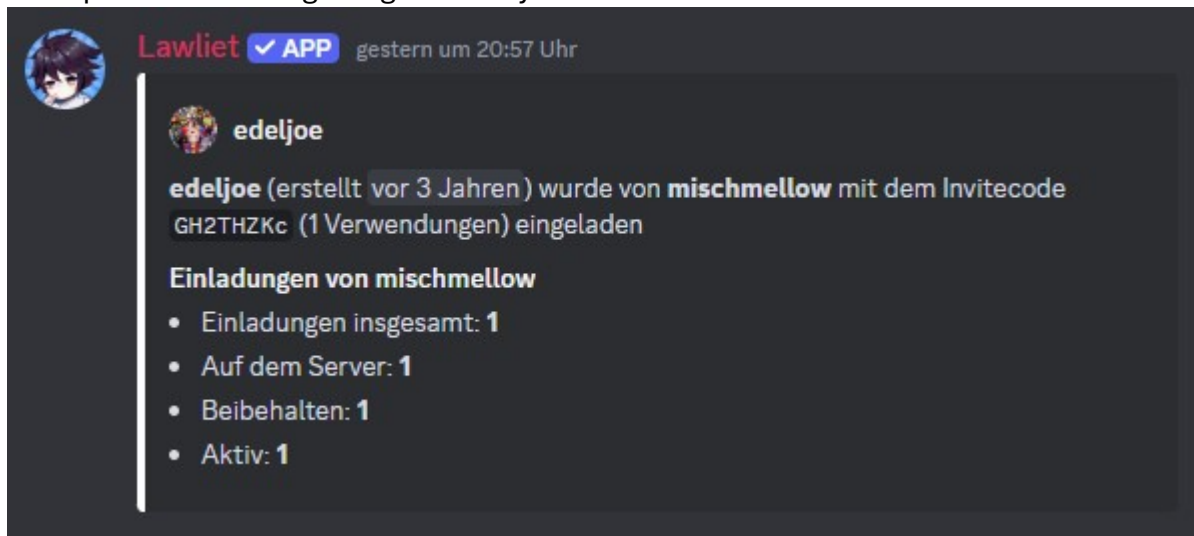

Example of someone getting invited by DISBOARD:

The screenshot shows a Discord message from the Lawliet bot (verified app) posted yesterday at 21:14. The message is an embed for user **ss801**. It states that **ss801** (created 2 years ago) was invited by **DISBOARD** using the invite code **VwXTsXFxfZ** (3,702 uses). Below this, it lists statistics for invites from **DISBOARD**:

- Einladungen insgesamt: **3 902**
- Auf dem Server: **722**
- Beibehalten: **274**
- Aktiv: **48**

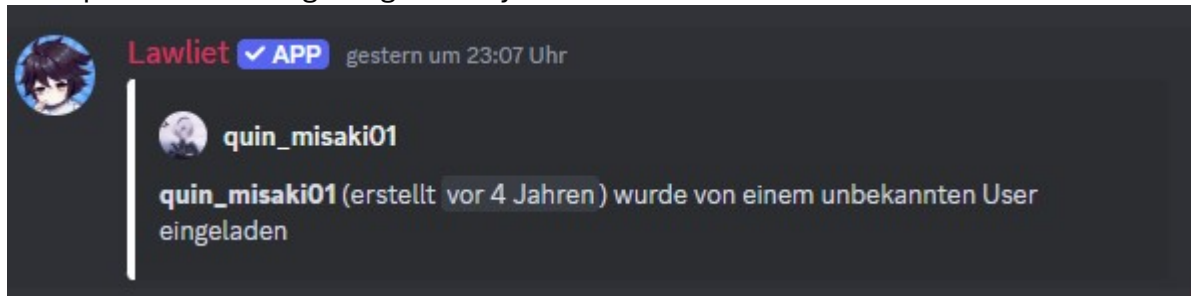

Example of someone getting invited by another Member:

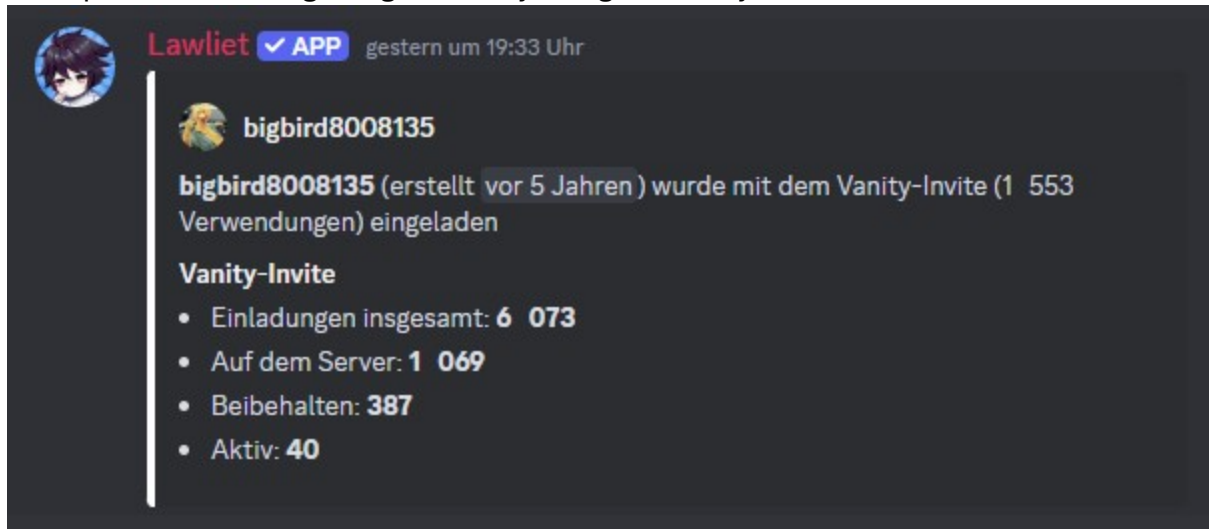

The screenshot shows a Discord message from the Lawliet bot (verified app) posted yesterday at 20:57. The message is an embed for user **edeljoe**. It states that **edeljoe** (created 3 years ago) was invited by **mischmellow** using the invite code **GH2THZKc** (1 use). Below this, it lists statistics for invites from **mischmellow**:

- Einladungen insgesamt: **1**
- Auf dem Server: **1**
- Beibehalten: **1**
- Aktiv: **1**

Example of someone getting invite by an unknown user:

Example of someone getting invited by using the vanity-link:

What I like about this bot is that, instead of just saying "UserX got invited by UserY," it also provides additional details, such as how many invites the user has already made, how many of these people are still on the server, the age of the invited person's account, and the specific invite link or code used for the invitation.

3. How it should be in the future with your Bot

3.1 Functionality

The bot should replace the Lawliet bot for invite tracking. How and what exactly is displayed in the log embed will need to be defined, but in general, we want to include as much functionality and detail as useful, while maintaining a visually appealing and clean embed design

As shown in the example above, I really like that it includes the invite code and statistics for the person who sent the invite, such as how many invites they've sent (or the vanity link, if it's not tied to a specific person), the account age of the invited person and how many of those are still active on the server.

Perhaps we can incorporate some of these elements into our embed as well? Additionally, as a coder, maybe you have some other useful and cool features we could include? I'm open to your ideas!

It should be a collection of useful information related to the invite itself, the person who created the invite and the person who was invited.

It should also find a way to display when an unknown user invited someone, or when it's not possible to identify who exactly sent the invite. We can mostly base this on the Lawliet examples above, using a similar approach to handle these situations.

As always, permissions for the commands should be manageable through our permission system. They should not be usable by default and should only be accessible to the roles/users I add to it.

3.2 Commands

/invite-log [@Channel]

- This command allows me to set up the channel where the bot will post invites.
- We need a way to remove or unassign the log channel. The bot should continue to function without errors, even if no channel is assigned. When no channel is assigned, this function should essentially be disabled, but the bot must still run smoothly without any issues.

/invite-config

- Not sure if it's necessary, but we need a way to check which channel we've assigned the logs to be sent to.
