

Meeting Protocoll

1. Foreword

From time to time, we have team meetings where we document our goals and discussed topics. The protocol also includes details such as who attended, who failed to decline the invitation, and other relevant information like the date and time of the meeting. This allows everyone to review it later and be reminded of the agreements made.

2. Current State

We currently use a free Embed Bot to create the protocol embed, but the process is complicated and time-consuming. An example of the embed can be found on the next page. Since it is in German, I will explain what each section means.

Right now, everything is written and formatted from plain text, without predefined topics or categories. The entire protocol, including the topics, must be manually written.

Here is a list and explanation of the composition and content of the embed:

- The Embed has a thumbnail picture
- **“Meeting Protokoll”** is the headline which simply means “Meeting Protocol”
- Directly below, you will find the date and time of the meeting
- **“Anwesenheit”** means attendance and lists all the people who participated in the meeting
- **“Nicht abgemeldet”** means something like “not excused” and lists people who did not show up and missed to give us response whether they will attend or not
- **“Inhalt”** equals “content” which outlines what was discussed during the meeting.
- Within **“Inhalt”** I underlined the topics and listed the bullet points below, which represent information related to each topic. These points are flexible, vary from meeting to meeting, and will be adjusted and listed according to each meeting.

Meeting Protokoll

Vom 03.03.2024
16:00 – 16:40 Uhr

Anwesenheit

Shoxx
Dorian
Büddi
Revi
Liz

Nicht abgemeldet

Furorian
Kiri

Inhalt

TikTok PayPal

- Rücksprache von Shoxx mit Kiri

Vorschläge

- Melonen Sticker -> Abgelehnt: Kein wirklicher Nutzen/Sinn
- Flohmarkt -> Abgelehnt: Mangels Interesse und Sicherheit

Live Ping

- Automatisch nicht umsetzbar aktuell
- Live Ping Rolle ist vorhanden
- Kiri bekommt Rechte im # [📺] · live zu posten. Bitte gleiches Format wie Twitch Posts benutzen!!

Generelle Events

- Wenn Lust auf kleinere Events zu organisieren (AmongUs, etc.) bitte mit den Eventmanagern Büddi/Dorian zwecks Umsetzung sprechen

Werwolf Event

- Ende März/Anfang April von Dorian organisiert

Größeres Event mit Preis

- 2v2 ARAM Turnier mit Preisgeld im April, Organisation Dorian/Büddi
- Regeln ähnlich AnimeGamingCafe 2v2 Aram Event (Kann man kopieren aus deren Ankündigungs Channel)

Entbannung Milim

- Wird entbannt, bekommt aber 2 Warns
- Shoxx informiert sie darüber
- Bitte bei erneuten Verstößen Ihrerseits vorher mit dem Team absprechen, was passiert (Ob Mute, Ob Warn, Ob Ban etc.)

3. How it should be in the future with your Bot

Anything that makes the process easier compared to now is needed! Whatever ideas you have, feel free to share them with me!

I will just list what we need, along with some things that would be nice to have. Feel free to improvise based on your own coding knowledge and possibilities and explore solutions I may not have even considered.

In general, I want to achieve an outcome similar to our current embed, with as little effort as possible and in the easiest way possible.

Here is a list of things we need, along with some features I would like to have (if possible to code):

- **/Protocol** Command which initiates the creation of the Embed
If we code the command so that it sends the embed to the channel where the command is executed, I believe we only need this command and won't require a separate one to define the general destination for the protocol.
- The basic design of the current embed should be maintained in principle.
- We need all the information (=topics) we already have (see the picture above), including the thumbnail. The thumbnail will be the exact same in all the protocols.
- The best and easiest way to create the embed could be by triggering a popup when executing the command. This popup could have predefined categories, such as "Time of the Meeting," etc., so I would only need to fill in the information myself. I've seen this type of popup in ticket bots, where it prompts you to provide information before creating a ticket.
- I'm not sure if this is possible to code, but it would be really cool if we could implement a dropdown-like menu to define who attended the meeting. Since only people with the @Serverteam role will be attending, it could automatically recognize who has this role and populate the dropdown with their names. This way, I could simply select from the list of attendees instead of manually typing each person's name.
- As always, permissions for the commands should be manageable through our permission system. They should not be usable by default and should only be accessible to the roles/users I add to it.
